

## AMENDMENTS TO THE CLAIMS

Please cancel claims 1-29 without prejudice.

Please add claim 30-54.

A complete list of claims as currently amended follows:

1-29. (canceled).

30. (new) A controlled release methylphenidate tablet comprising:

(A) an immediate release methylphenidate coating comprising;

(a) methylphenidate or a pharmaceutically acceptable salt or isomer thereof ;

(b) a binder; and

(c) optionally a stabilizer;

(B) a controlled release methylphenidate core tablet comprising:

(a) a compressed mixture comprising:

(i) methylphenidate or a pharmaceutically acceptable salt or isomer thereof;

(ii) 1 to about 50% of the total weight of the compressed mixture of a hydrogel polymer ; and

(iii) a diluent; and

(b) an enteric coating surrounding the compressed mixture comprising;

(i) 45-80 weight percent based upon the total weight of the enteric coating of at least one enteric polymer; and

(ii) at least one conventional processing aid; and

(C) optionally an aesthetic coating

wherein the controlled release methylphenidate tablet exhibits the following dissolution profile when tested in a United States Pharmacopoeia type 2 (paddle) apparatus at 50 rpms in 900 ml of phosphate buffer with a pH of 7.5 and at 37°C:

1-35% of the methylphenidate is released after 1 hour; 5-40% of the methylphenidate is released after 2 hours; and not less than 70% is release after 10 hours and when administered to humans exhibits a plasma peak for the immediate release layer ( $T_{\max 1}$ )

between 1 and 5 hours, a plasma peak for the controlled release core ( $T_{\max 2}$ ) between 4 and 12 hours, and a plasma trough ( $T_{\min}$ ) between 2 and 7 hours in between the two peak plasma levels.

31. (new) The controlled release methylphenidate tablet as defined in claim 30 wherein the controlled release tablet releases 42-53% of the methylphenidate after 4 hours of testing in a United States Pharmacopoeia type 1 apparatus at 100 rpms in 500 ml of phosphate buffer with a pH of 7.5 and at 37°C.

32. (new) The controlled release methylphenidate tablet as defined in claim 30 wherein the controlled release tablet releases 67-81% of the methylphenidate after 6 hours of testing in a United States Pharmacopoeia type 1 apparatus at 100 rpms in 500 ml of phosphate buffer with a pH of 7.5 and at 37°C.

33. (new) The controlled release methylphenidate tablet as defined in claim 30 wherein the diluent is selected from the group consisting of sugars, starches or vegetable oils, lactose monohydrate, calcium phosphate, dextrin, dextrose, maltitol, maltose, starch, sucrose or talc.

34. (new) The controlled release methylphenidate tablet as defined in claim 30 wherein the diluent comprises lactose monohydrate.

35. (new) The controlled release methylphenidate tablet as defined in claim 30 wherein the hydrogel polymer in the compressed mixture is selected from the group consisting of methyl cellulose, hydroxymethyl cellulose, polyvinyl pyrrolidone, hydroxyethyl cellulose, hydroxypropyl cellulose, hydroxypropyl methylcellulose, polyethylene oxides, gums, acrylate polymers and methacrylate polymers.

36. (new) The controlled release methylphenidate tablet as defined in claim 30 wherein the hydrogel polymer in the compressed mixture is hydroxypropyl methylcellulose.

37. (new) The controlled release methylphenidate tablet as defined in claim 30 wherein the at least one conventional processing aid is selected from the group consisting of talc, glyceryl monostearates, calcium stearate, magnesium stearate, stearic acid, glyceryl behenate, and polyethylene glycol.

38. (new) The controlled release methylphenidate tablet as defined in claim 30 wherein the at least one conventional processing aid is colloidal silicon dioxide and magnesium stearate.

39. (new) The controlled release methylphenidate tablet as defined in claim 30 wherein the enteric polymer is selected from a group consisting of zein, methacrylic acid copolymers, cellulose acetate phthalate, hydroxypropyl methylcellulose phthalate, hydroxypropyl methylcellulose acetate succinate, cellulose acetate trimellitate, shellac, polyvinyl acetate phthalate or mixtures thereof.

40. (new) The controlled release methylphenidate tablet as defined in claim 30 wherein the enteric coating polymer comprises a mixture of methacrylic acid copolymer and zein.

41. (new) The controlled release methylphenidate tablet as defined in claim 30 wherein the at least one conventional processing aid is selected from a group consisting of acetyltributyl citrate, triacetin, acetylated monoglyceride, coconut oil, poloxamer, acetyltriethyl citrate, glycerin sorbitol, diethyloxalate, diethylmalate, diethylfumerate, dibutylsuccinate, diethylmalonate, dioctylphthalate, dibutylphthalate, dibutylsebacate, triethyl citrate, tributylcitrate, glyceroltributyrate, polyethylene glycol, propylene glycol and mixtures thereof.

42. (new) The controlled release methylphenidate tablet as defined in claim 30 wherein the at least one conventional processing aid is acetyltributyl citrate.

43. (new) The controlled release methylphenidate tablet as defined in claim 30 wherein the  $T_{max1}$  occurs less than 3 hours and declines in less than 5 hours.
44. (new) The controlled release methylphenidate tablet as defined in claim 30 wherein the  $T_{max2}$  occurs about 7 to 9 hours and declines to about 1.4 ng/ml in about 14 to 18 hours.
45. (new) The controlled release methylphenidate tablet as defined in claim 30, wherein the tablet when administered to humans exhibits a maximum plasma concentration up to about 20 ng/ml and an  $AUC_{0-24}$  up to about 200 ng-hr/ml.
46. (new) The controlled release methylphenidate tablet as defined in claim 45 wherein the tablet when administered to humans exhibits a maximum plasma concentration of about 3 to about 20 ng/ml and an  $AUC_{0-24}$  of about 30 to about 200 ng-hr/ml.
47. (new) A controlled release methylphenidate tablet consisting essentially of:
- (A) an immediate release methylphenidate coating consisting essentially of:
    - (a) 30-60 weight percent based upon the total weight of the immediate release coating of methylphenidate or a pharmaceutically acceptable salt or isomer thereof ;
    - (b) 40-70 weight percent based upon the total weight of the immediate release coating of a binder; and
    - (c) 0.005-5 weight percent based upon the total weight of the immediate release coating of a stabilizer;
  - (B) a controlled release methylphenidate core tablet consisting essentially of:
    - (a) a compressed mixture consisting essentially of:
      - (i) 5-40 weight percent based upon the total weight of the compressed mixture of methylphenidate or a pharmaceutically acceptable salt or isomer thereof;
      - (ii) 3-40 weight percent based upon the total weight of the compressed mixture of a hydrogel polymer;

(iii) 25-90 weight percent based upon the total weight of the compressed mixture of a diluent; and

(iv) 0.1-10 weight percent based upon the total weight of the compressed mixture of an anti-sticking agent; and

(b) an enteric coating surrounding the core tablet consisting essentially of;

(i) 45-80 weight percent based upon the total weight of the enteric coating of at least one enteric polymer;

(ii) 0.5-15 weight percent based upon the total weight of the enteric coating of a plasticizer; and

(iii) an anti-sticking agent; and

(C) optionally an aesthetic coating

wherein the controlled release methylphenidate tablet exhibits the following dissolution profile when tested in a United States Pharmacopeia type 2 (paddle) apparatus at 50 rpms in 900 ml of phosphate buffer with a pH of 7.5 and at 37°C:

1-35% of the methylphenidate is released after 1 hour; 5-40% of the methylphenidate is released after 2 hours; and not less than 70% is release after 10 hours and when administered to humans exhibits a plasma peak for the immediate release layer ( $T_{\max 1}$ ) between 1 and 5 hours, a plasma peak for the controlled release core ( $T_{\max 2}$ ) between 4 and 12 hours, and a plasma trough ( $T_{\min}$ ) between 2 and 7 hours in between the two peak plasma levels.

48. (new) The controlled release methylphenidate tablet as defined in claim 47 wherein:

(A) the immediate release methylphenidate coating consists essentially of;

(a) 40-50 weight percent based upon the total weight of the immediate release coating of methylphenidate or a pharmaceutically acceptable salt or isomer thereof ;

(b) 45-60 weight percent based upon the total weight of the immediate release coating of a binder; and

(c) 0.01-2 weight percent based upon the total weight of the immediate release coating of a stabilizer;

(B) the controlled release methylphenidate core tablet consists essentially of:

- (a) a compressed mixture consisting essentially of:
  - (i) 10-25 weight percent based upon the total weight of the compressed mixture of methylphenidate or a pharmaceutically acceptable salt or isomer thereof;
  - (ii) 3-40 weight percent based upon the total weight of the compressed mixture of a hydrogel polymer;
  - (iii) 45-85 weight percent based upon the total weight of the compressed mixture of a diluent; and
  - (iv) 0.5-5 weight percent based upon the total weight of the compressed mixture of an anti-sticking agent; and
- (b) an enteric coating surrounding the core tablet consisting essentially of:
  - (i) 45-80 weight percent based upon the total weight of the enteric coating of at least one enteric polymer;
  - (ii) 1-5 weight percent based upon the total weight of the enteric coating of a plasticizer; and
  - (iii) an anti-sticking agent.

49. (new) The controlled release methylphenidate tablet as defined in claim 47 wherein the controlled release tablet releases 42-53% of the methylphenidate after 4 hours of testing in a United States Pharmacopoeia type 1 apparatus at 100 rpms in 500 ml of phosphate buffer with a pH of 7.5 and at 37°C.

50. (new) The controlled release methylphenidate tablet as defined in claim 47 wherein the controlled release tablet releases 67-81% of the methylphenidate after 6 hours of testing in a United States Pharmacopoeia type 1 apparatus at 100 rpms in 500 ml of phosphate buffer with a pH of 7.5 and at 37°C.

51. (new) The controlled release methylphenidate tablet as defined in claim 47 wherein the  $T_{max1}$  occurs less than 3 hours and declines in less than 5 hours.

52. (new) The controlled release methylphenidate tablet as defined in claim 47 wherein the  $T_{max2}$  occurs about 7 to 9 hours and declines to about 1.4 ng/ml in about 14 to 18 hours.

53. (new) The controlled release methylphenidate tablet as defined in claim 47, wherein the tablet when administered to humans exhibits a maximum plasma concentration up to about 20 ng/ml and an  $AUC_{0-24}$  up to about 200 ng-hr/ml.

54. (new) The controlled release methylphenidate tablet as defined in Claim 53 wherein the tablet when administered to humans exhibits a maximum plasma concentration of about 3 to about 20 ng/ml and an  $AUC_{0-24}$  of about 30 to about 200 ng-hr/ml.
